

Talking to the Moon

The `make_art` function

This `make_art` function can be used to generate wonderful pieces of art that, from my visionary perspective, reflect different observations of a moon.

The function takes two arguments:

1. The amount of rings forming the moon
2. The size of the rings forming the moon

An example of input and the result is shown below:

```
make_art(30,5)
```
